

## 2021 – External Quality Assessment Metals in blood

(AGLAE's reference '116')

In the frame of this assessment, participating laboratories will measure heavy metals' concentration in blood samples.

- Matrix: **blood**
- Receipt of 2 samples of 5 ml
- Analysis in duplicate (2 measurements) for each sample
- Concentration determination of **lead, cadmium, mercury, selenium, strontium and zinc**

*Note that no clinical interpretation will be requested.*
